

Enabling Queue Watcher

1. Change directory to /<install_dir>/properties
1. locate [customer_overrides.properties](#) file
2. add the following syntax to the file
[noapp.queueWatcher=true](#)
3. Save the file
4. run setup.sh (<install_dir>/bin)

Verification: Save QueueWatcher.html file to your local pc and execute it by double-clicking it.

Queue Watcher allows the GIS users to monitor

- Active thread in different queues

- Queue allocation

Queue watcher html page can be deployed and executed locally from GIS users' machines.
